

JOURNAL

The Gambler's Fallacy

Christopher Murphy

AUGUST, 2018

On 18 August, 1913 a hushed audience gathered around the roulette table at the [Monte Carlo Casino](#). In an unprecedented run, that had attracted a captivated group of gamblers, the ball had fallen black 26 times in a row...

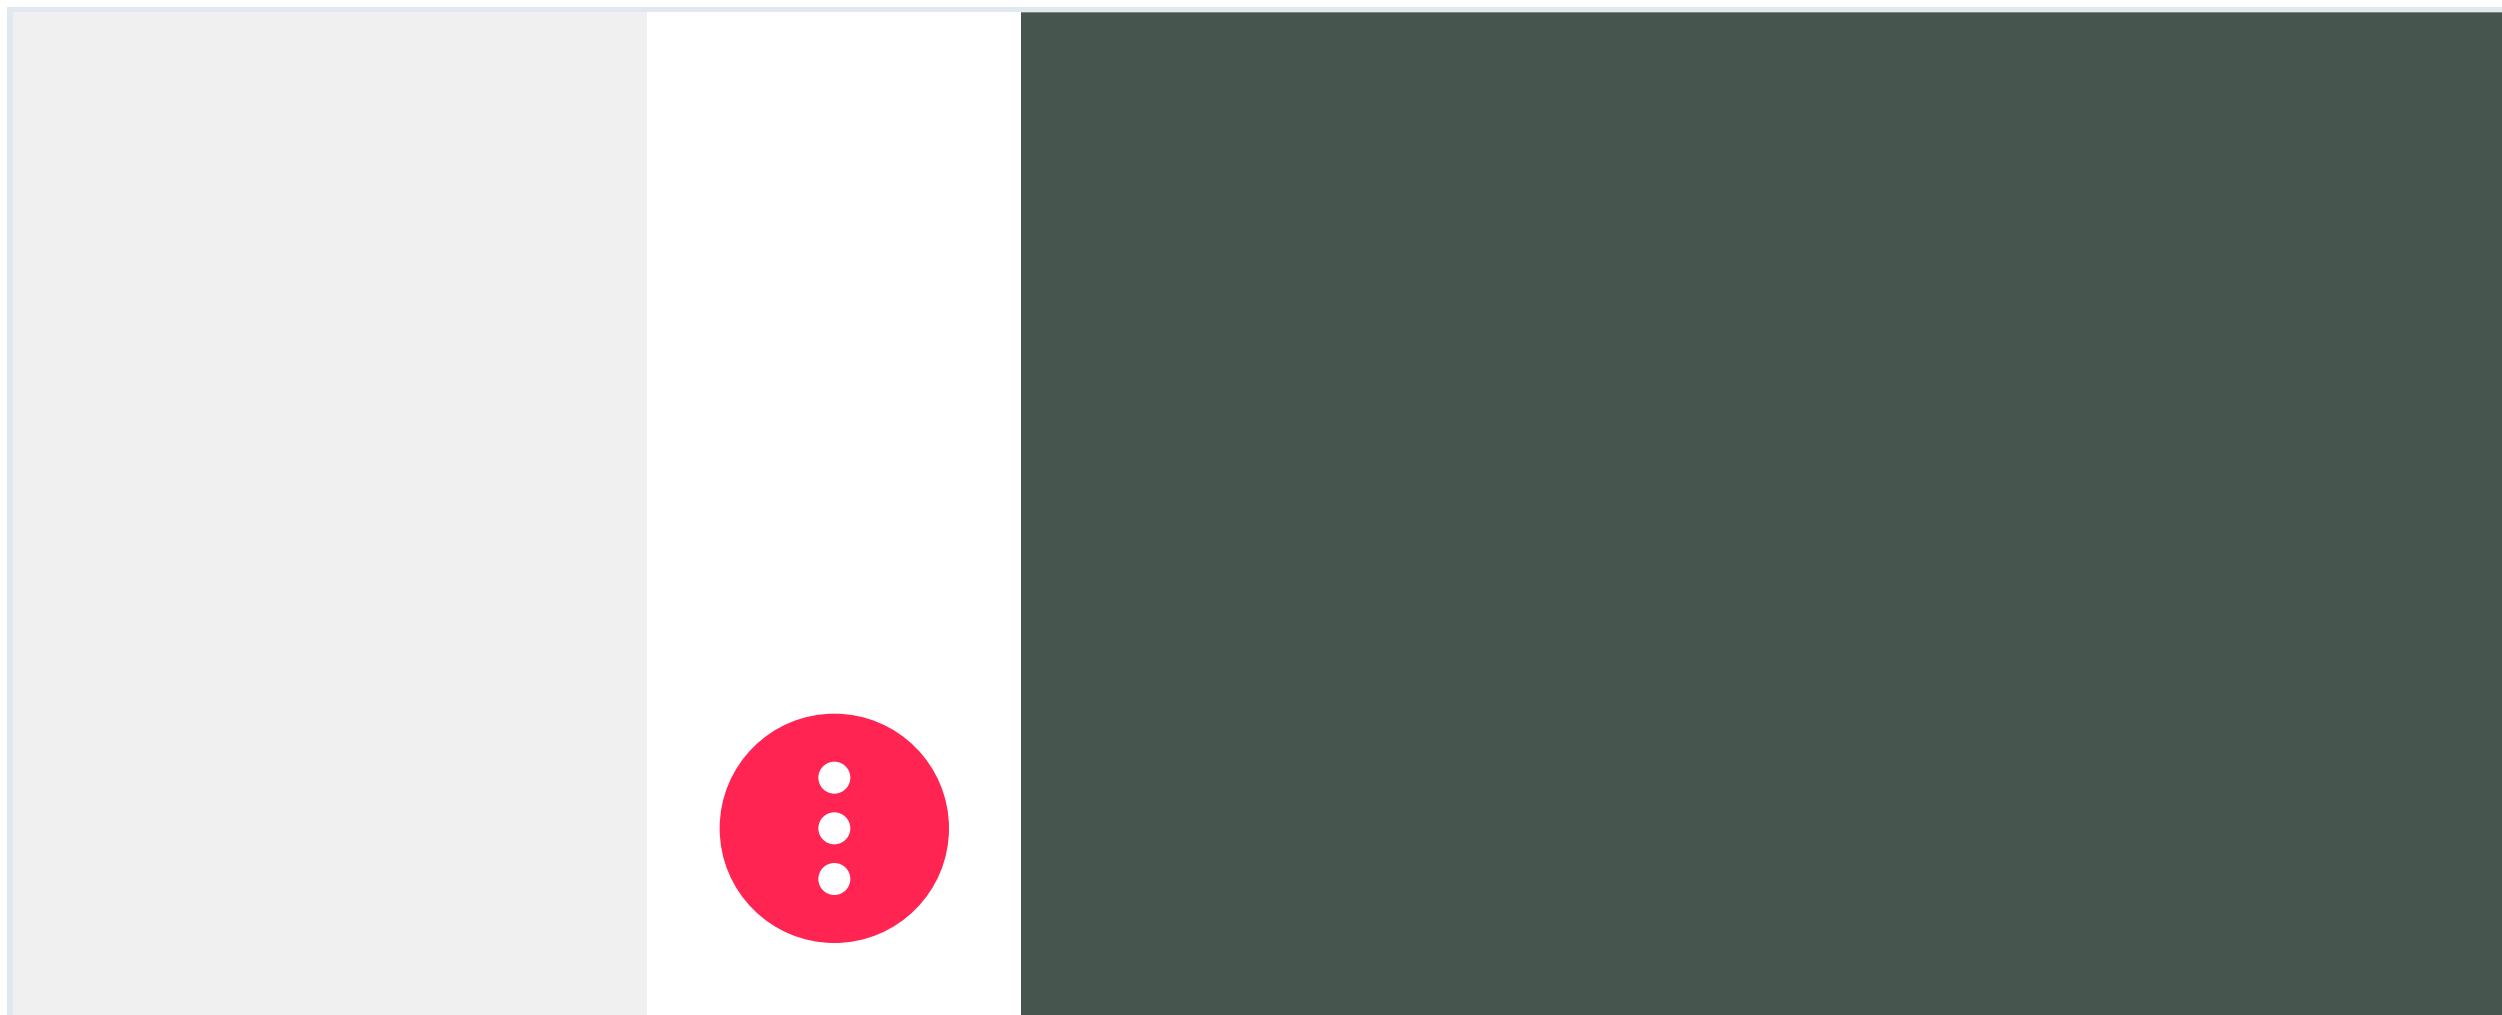

An extremely uncommon occurrence, with a probability of around 1 in 136.8 million, the gamblers had lost lost millions betting against black, reasoning incorrectly that the streak must – surely – come to an end.
